

Amendments to the Specification

Please amend the specification as follows:

Amend the 3rd paragraph on page 1 beginning on line 14 as follows:

- A disadvantage with notching of cabins/buildings in real timber is the high requirement of premium quality timber. Such timber is today a scarce resource and the buildings therefore become expensive. Another disadvantage is the specific thermal insulation. Compared to well insulated buildings of modern construction, the thermal insulation is significantly poorer. In a Nordic climate notched buildings that are not provided with an internal insulation ~~is~~ are not suited for all year use and ~~is~~ are quite uneconomical also for leisure use.-

On page 3, delete the two full paragraphs in lines 22 through 24.
